Academic Isolationism Must Be Broken Down

by Dr. Oscar C. Page

Dean of the College

A movement is afoot in the midwest that would have been unheard of ten years ago. A group of business men are going to elementary and high schools, talking to students and telling them that a college education is not the essential ingredient in their ability to obtain a job.

The U. S. Department of Labor had predicted in 1960 that there would be more and more demand for people with college degrees and that industry and management would create jobs that would require college degrees.

This prediction was wrong and as a result many jobs are being filled by 18-year-old men and women just graduated from high school. If someone had predicted this phenomenon in 1960 he would have been shouted down by leading academicians and college administrators, as well as government officials. Yet there were those who were predicting such a change, those who were *never* committed to the idea that higher education held the solution to all the ills in society.

That education is the answer to all of society's ills has been a common misconception, brought about to a certain extent by fathers and mothers who during the depression suffered greatly and saw education as the savior that would keep their children from suffering as they did.

As a result of the great emphasis on education, educators created a situation that in my opinion is unhealthy. It could be called *isolationism* since a unique atmosphere has been caused whereby the person takes leave of the everyday activities of normal life and participates in an isolated society that exists for four years. This society, if not carefully structured will become so different that the people it produces cannot adjust to regular life after four years of segregation from the outside world.

A unique situation develops because the people who participate in the isolated society do not usually have the responsibility of family, finances, or the world in general, although they are interested in all of these, and have displayed this interest over the past decade by demonstrating against certain abuses that exist in society and the world. Many of the demonstrations have been the result of the distorted view of life created by the college community.

This period of isolationism is also viewed as an intensive period of study when the person climaxes a sixteen year learning experience that provides him with "all the knowledge" that is necessary for the remainder of his life.

Another unique attribute often attached to this situation is that the college as an institution has claimed to prepare the whole person, a wholeness that involves the spiritual, the intellectual, the physical and the social being. College adminis-

trators and faculty have laid claim to this feat but it is a claim that can be questioned.

Throughout history colleges have been caught up in something that is good yet bad. They have been caught up in an idealism—an idealism that has said to students and faculty over the past twenty years that if you will only take some philosophy, sociology, psychology, math, biology, history, you will be prepared to go out into the rough, tough world and compete with your fellow beings. I am not belittling idealism, because idealism is the father of creativity and without this idealism society will never change, but there has to be a balance between idealism and the practical side of life.

Colleges and universities have served a very good purpose in laying the foundation for the creation of new ideas but they have become so absorbed in what they have accomplished that they have forgotten about the world outside and have become isolated.

Many would say the demonstrations of the 60's have already broken this isolationism but I do not agree. Demonstrations brought change but it was mainly confined to internal reform—such things as destroying compulsory ROTC or creation of Black Studies—but these two changes, which have some merit, are typical of the curriculum changes that have occurred—they were changes within and for the isolated society. They had their repercussions outside the walls of the college but they didn't contribute to the need for a better relationship between college and community. You can change the curriculum every year but it doesn't help unless the teachers and administrators keep up with the changing needs of society.

This is all evolving. Colleges and universities have in many instances faced up to the fact that the college does not have the answer to all problems. They have faced up to the fact that the old traditional classroom experience is not the only experience that the student must have. The student must be provided with the opportunity to have some non-traditional learning experiences that include such things as independent studies, practicums, internships, field studies, and things of this nature.

The isolationism of the past two decades must be broken down. Colleges cannot have walls around them. Colleges must tear down the walls, reach out into the community, and become a service organization within the community in which they exist.

Higher education has, I believe, one primary proper function—to teach those students who have the capacity and desire to learn from books how to learn. It provides the edu-

cated man or woman with skills to make the learning relevant. This must be the college's function and the college cannot do this if it remains an isolated society. You cannot learn how to learn by limiting yourself to the study of math or sociology. You don't necessarily have to have algebra, but by taking some form of mathematics you will learn a specific way of thinking—a way that is different from the way the historian or the philosopher would think, but you also need to understand the way the historian or the philosopher thinks in order to have a well rounded background, a background that equips you to participate in a continuing learning experience.

The college of the future has to do certain things and the students who will be leaders in the colleges and universities of the future should keep these in mind. First, the colleges have to retain their idealism, because as I said earlier, idealism is the father of creativity. Secondly, this idealism must be mixed with an understanding of the outside world's needs. Every academician should if at all possible maintain close friendship with people who are not in the academic world so that he can attain a balanced way of thinking. Third, colleges must continue to encourage students to take basic courses to get a sound background on which to build a learning experience. And fourth, colleges and universities must create a sound program for independent study and non-traditional learning experiences that will bring the institution into closer contact with the community.

All of the preceding concepts can be accomplished much more effectively at a small institution. At a small institution, such as Wesleyan, faculty and students have an opportunity

to develop programs that meet the students' needs. However, even small institutions have failed to be sensitive to all the demands and needs of students and society. Sometimes smallness gets in the way of seeing the obvious—the small harmonious community often overlooks the need to relate to the community, but if faculty and administrators remind themselves to be sensitive to the needs of the people they serve the institution will be great.

The decade of the seventies is critical—private education as well as public, on the college, secondary, and elementary levels is being questioned. What are we teaching—how relevant is it to the needs of society?

To this last question I say, the college or university that breaks out of its isolationism and becomes an integral part of the community is going to be great—it is going to be a viable institution within a complex society, an institution that creates learning situations, that stimulates the person to learn, and teaches the person how to learn.

The most important thing about the institution that adopts this philosophy is that the student will have this learning experience within the framework of a common society rather than in a distorted society that fails to look outside and observe the changing needs of the contemporary student. As students leave our institutions they must retain the idealism they have developed but they must also take a close look at how it relates to historical tradition and society. Ultimately they will develop a balanced viewpoint that respects tradition but at the same time places tradition under the scrutiny of contemporary ideas and needs.

In Master Class during Project '73
Judith Raskin, Met star, coaches voice
major.

High school juniors and seniors, over 200 from 15 states, encountered Wesleyan Jan. 27-28. They met students and faculty, slept in dorms, toured buildings, saw student-directed plays, tasted academic and social life — experienced the "togetherness" of Wesleyan, as a prospective voice student from Virginia expressed it. Millard Beckum, Director of Admissions, and Ginna Pritchard, president of the students admission board, believe a number of these girls, many of whom were invited by alumnae to sample their Alma Mater, will choose Wesleyan. Another high school Encounter weekend is planned for the spring.

Conversations have been held in recent months between interested students and various officials: the academic dean, the alumnae director, the admissions director, the curriculum committee, Trustees, and President Strickland. These dialogues, initiated by Dean of Students Joyce Schafer, have covered a variety of subjects. Example: Under discussion with

Trustees, after their fall meeting, was the legal age of students and when they should be obligated to take on the responsibilities accompanying rights and freedoms. Ten students picked at random from the four classes have also met together in search of answers to problems of housing, drugs, noise, communication.

The College family has come face to face on the classroom and platform level with such personalities as Metropolitan Opera star Judith Raskin, Parapsychologist Evelyn Monahan, Congresswoman Shirley Chisholm, Lt. Gov. Lester Maddox, and others during Project '73, in Jan.

Exposure to other cultures during the short term encompassed trips by three groups to historic Greek centers, to France, and to recreational areas of the Alps; special courses offered during the short term ranged from new religious movements of Japan to Afro-American studies. On Jan. 23 Wesleyan hosted the Southern Folk Festival and workshop.

FEBRUARY, 1973

A goal of \$3.5 million, to be raised over the next three years, has been set by the steering committee for Wesleyan's fund-raising drive. The kickoff dinner for the Macon area will be held March 1 and solicitations will begin the next day. Leo B. Huckabee Jr. is chairman of the Macon area for the drive.

HONOR LINDA

At a special birthday luncheon in the Manget Dining Room, Jan. 15, Wesleyan presented a certificate of appreciation to Linda Anderson Lane, '19.

Scholarship

The Mildred McCrory Mitchell Scholarship Fund passed the \$10,000 mark in Dec., reports Lillian Budd Jackson, '24, who has spearheaded this memorial project. Contributions have come from many sources, said Lillian, including \$1.00 earned by babysitting by her niece, who hopes some day to come to Wesleyan.

SETSUKO KATO wrote the Stricklands that her grandmother had returned home. "We always think of you and talk about you . . . The other day I heard from Miss Hashigami. I am so glad to know she enjoys every minute at Wesleyan . . . She says that everyone is very nice to her . . . appreciate your thoughtfulness."

KATSUKO KIMURA, Tokyo, Japan, back at ICU, wrote the Stricklands last fall that she had settled down and adjusted to the Japanese way of life, very busy with her senior thesis. She already has a job for after graduation with the Tokyo Junior Chamber of Commerce, Inc., whose office is in the center of Tokyo. She was offered four jobs, did not choose a big company, as she hopes to continue working after marriage. She misses many things at Wesleyan, she wrote, especially the student life. "I bet the Wesleyan campus is now pretty with yellow leaves. Japan is also in the best season (late Oct.) when the sky is blue and high, and leaves are tinted. The fall is the season for an appetite, too."

MASAKO IKEHRA KAWADE, Aichiken, Japan, wrote Mrs. Strickland of her marriage on Jan. 20, last year. "We had the Christian wedding ceremony and dinner party at Hotel Okura in Tokyo. We went to Kyushim, the southern island, on honeymoon . . . I moved to Toyota City, near Nahoya City, where my husband works." Masako teaches English con-

versation at a business school twice a week, and has been practicing driving.

MARIAN STRINGER ADAIR, who was graduated from U of New Mex (as was her husband), has been awarded a two-year scholarship to the graduate school of Emory U, to work in sociology.
